LOCAL PASSENGER.

Leaves Reno for San Francisco at 9:05 A.M.

Arrive in Reno from San Francisco at 7 A.M.

GOING NORTH.

Hammond & Wilson's stages leaves for Susanville at 8 A.M., returning at 1 P.M. Fare \$12.

TESSABORA ITEMS.

(From the *Tessabora Times*)

The time has gone by when any one can, simply by digging a hole ten feet deep into the ground and dubbing that hole a mine, sell it as such to investors in mining properties. What moneyed men desire is to purchase mining ground which shows for itself that it has an intrinsic value, and in order to make a sale the owners of claims must do more than to merely scratch off the surface of the ground. To our miners we have only to say: Explore your veins along their courses from end to end of your claims, regardless of contractions or barren zones. By so doing you will enhance the value of your claims and in due course of time reap a rich reward for your labor.

Mr. Samuel Linkton, the Superintendent of the Grand Prize mine, informed us, previous to his departure for San Francisco, that it was the intention of his company to put up a thirty-stamp mill as soon as possible. At present the Grand Prize ore is being worked by the Windsor mill, which has only ten stamps, and two shifts of two men each are able to extract ore enough to keep the little mill running steadily day and night.

There are thousands of tons of rich ore out of the ground in this district, which await the erection of a custom mill, and there are tens of thousands of tons which can be easily extracted and will pay largely. Of the numerous fine prospects for paying mines it is now our intention at present to make special mention, but will do so from time to time and always from personal knowledge.

One great desideratum of this camp is good fuel, and any one who will discover a coal mine would have his fortune assured. Sagebrush does very well, but soon the whole country will be denuded of that article, and then either the mills will have to get coal from the railroad or cut pine from the mountains, either of which will necessarily be expensive.

So little snow has fallen in the mountains that the prospects for a long season of placer mining are anything but favorable. It is now too late to look for snow enough to more than temporarily increase the water supply, but this will not interfere with prospecting for quartz; on the contrary it will serve to stimulate that branch of the mining business.

The Robert Everett mine is showing very well. This mine has hitherto been but little noticed, but there is no doubt that it will soon make its own reputation. They are down forty-seven feet and have a regular defined ledge, which is said, by disinterested parties, to give an average assay of \$200 per ton.

Tim O'Flaherty, owner of the Elko stone quarry, situated six hundred yards west of the Young America hoisting works, is ready to contract to furnish stone for building purposes. Mr. O'Flaherty informs us that he has already contracted to build two large fire proof buildings.

During the first eighteen days of the present month Mart Smith, Wells, Fargo & Co.'s agent in this place, has received and shipped Grand Prize bullion to the amount of \$55,598 14.

"How high is that" for one little 10-stamp mill?

Superintendent A. V. Lancaster of

the Young America South is timbering the shaft preparatory to further developments of this valuable property. They have applied for a patent, which will be issued in a few days.

G. W. Garside, Deputy United States Mineral Surveyor, has been making surveys of the principal mines and locations. He has left for San Francisco, where he goes to have his map lithographed.

The "boys" are all out prospecting, and judging from the rock they are continually bringing in, we shall soon hear of some very rich discoveries.

The Liberty contract is finished. The shaft is now fifty-three feet in depth, ten feet being run on the ledge, which looks very promising.

They are taking some very rich rock out of the Du Prees. Hoisting works will be erected this Spring on this valuable property.

Colonel Al. McCann, Superintendent of First Easterly Extension of the Grand Prize and Ophir, reports both mines looking well.

J. B. Rice has struck it rich in the Humpy mine. This is the Second North Extension of the celebrated Baltic Mine.

The Beard brothers are busy repairing their water ditch, anticipating a very successful placer mining season.

A number of substantial business houses will be built this Spring, as soon as we can ship lumber in.

They are working Grand Prize ore at the Windsor mill up to 94 per cent. of its assay value.

Steve Henley has charge of the retorting and melting department of the Windsor mill.

The Enterprise mine has been bonded to Victor Fembach, of San Francisco, for \$40,000.

Muncy & Co. are crosscutting the ledge in the Moscow, and the ore looks "way up."

The Grand Deposit and Venture mines are about being incorporated in San Francisco.

The Young America Company will start up by the latter part of April.

They have struck sulphurite ore in the West Extension of the Grand Prize.

CORNUCOPIA ITEMS.

(From the *Tessabora Times*)

The South Leopard Company have drained the water from their mine and work on the same is progressing with satisfactory rapidity. The prospects are favorable for the early announcement of a rich strike in the South Leopard, and holders of the stock are consequently feeling happy.

We learn that work will soon be resumed upon the property of the Cornucopia Consolidated Company. That company own some good ground, and it is to be hoped that their affairs will soon be arranged so that they can develop their mines.

The Fisher, which is said to have a large and rich vein of mineral, will be vigorously worked. Our friend L. I. Hodge, thinks the Fisher is going to have, and we hope he may not be deceived.

It is reported that a rich strike has been made in the Leopard mine, away down in the lower levels. We hope the rumor will be verified.

The Tip Top, Panther, Hussey, OK, Republic and other claims will doubtless give a good account of themselves before long.

Ryc.—Josiah Dodge, the most successful farmer probably in this country, now has 200 acres of his land sown in rye. For four years past he has put in fifty acres each year and every year becomes more convinced of the great value of this crop for these hills. Hereafter he will each year plow up fifty acres and put in the same amount thus having the use, for pasture and hog feed, of each seedling for four years. He keeps a large dairy of cows and fatens sixty to eighty hogs. He has proved three points in regard to rye, and is now prepared to assert that for most hills and farms it is a much more profitable crop than alfalfa: 1st—it holds the ground well, preventing washing on side hills. 2nd—hogs will fatten well on it, harvesting it themselves, and leave enough to seed the ground, for three years. 3d—it is similar to clover for improving the land, by its fine roots and plowing under as a green crop.

Persons wishing anything in this line will find it to their interest to correspond with me. I am agent for the

"AMERICAN POULTRY JOURNAL".

The first of the kind in America. \$1.25 per year. Specimen copies 25 cents. Address all orders to

L. P. LORD,
Reno, Nevada.

Twins Monday, and she had been up since four o'clock washing. The clothes were out, and she was as happy as women generally are—on wash day—when "that" boy attempted to chin himself on the clothes line. It didn't break, oh no! but it came down, and before that boy had time to turn over and see what was the matter, she had split enough shingles over the side that was up to make fires for a month.

THAT was a fearful joke of Lord Norbury's, on sentencing to death a thief who had stolen a watch. "You made a grasp at time, my lad, but you clutched eternity."

MOST IMPORTANT ITEMS IN YESTERDAY'S DISPATCHES.

Mining Excitement.

SOUTH BOSROX, March 26.—The excitement in Essex county over mining is very great. Several new mines are to be opened and the one at Amesbury is soon to be vigorously worked. At Merrimac a shaft is already sunk 250 feet, and there are five levels with a length of 1500 feet, with indications of an immense vein of matter still below and beyond. The quantity in sight are estimated at 40,000 tons, besides a rich deposit of gray copper. Several veins of quartz were recently encountered, which are found to assay from \$20 to \$25 per ton. The gold and silver is apparently immeasurable in amount, and growing richer as they descend. These veins are supposed to meet a few hundred feet below the surface, forming perhaps a bed of ore richer than any yet discovered. The working force numbers forty at present, and 500 tons of first-class ore are produced monthly, worth \$110 per ton. All the land-owners in that region have already grown wealthy in anticipation.

Ex-Mayor Hall's Disappearance.

NEW YORK, March 25.—Hall's disappearance still agitates the public mind, but no trace can be discovered as to his whereabouts. The popular theory, and the one now most generally accepted, is that he fled to Europe to avoid the threatening disclosures of his associates in the ring frauds.

Chamberlain and Hampton.

COLUMBIA, S. C., March 25.—It is reported that Gov. Chamberlain leaves here at midnight for Washington. Gov. Hampton has not yet decided whether he will visit the Capitol or not. It is understood that he is awaiting advices from parties expected to arrive here to-morrow morning.

The Pope Dying.

TOME, March 25.—Amid the feverish excitement and unremitting labor at the Vatican, relative to the Consistory, the Pope has fallen ill again. It is certain that after the secret consistory of the 12th instant he fainted and had to quit reading his allocution. These fainting fits have recurred and the Pope has remained unconscious longer each time. He does not like his illness to be perceived, and makes a strong effort to hide it, producing a painful reaction the moment he gets back to his own apartments. He sinks into a chair and remains motionless, with his eyes closed like a corpse. Recent excitement has told upon him, and indeed upon several occasions during the Spring (which is always the dangerous season for him), his life has been almost despaired of. His physicians regard the fatiguing impressions of pilgrims with great apprehension.

The Pope's advisers are endeavoring to get France and Austria to revive the Roman question. It is hoped to induce Italy to so far recognize the Pope's temporal power as to cede Lombaria to the Holy See, where all the religious orders expelled from Rome could find an asylum.

Excitement in San Francisco.

SAN FRANCISCO, March 26.—A good deal of excitement was occasioned in the lower part of the city this morning by the escape of several wild steers of a drove being landed on the city front. One made his way to Montgomery avenue, up which he was pursued by a yelling crowd, assisting him with brickbats and pistol shots. The animal charged on the crowd several times, driving it pell-mell down the avenue. Several unlucky ones were hoisted rather unceremoniously and a vaquero and horse capsized. An express team shared the same fate. The steer was finally captured and shot without doing any very serious injury. Two more arrivals escaped to the southern part of the city and went up Mission street, attacking every one in the way.

It is reported that a child was killed by one of them, and that Captain Baker, of the harbor police, was dangerously injured in attempting to secure the beasts. A number of other

ors are reported seriously injured. The animals fairly cleared Front street for several blocks.

The meeting of the creditors of the firm of Erlanger & Hess has been postponed until to-morrow at 2 o'clock, at Erlanger & Hess' office.

The Chinese Question.

NEW YORK, March 26.—A Washington special says Senator Morton, who left Washington last night for his home, took with him the report and evidence of the Joint Commission of Congress, appointed to investigate the character and effect of Chinese immigration to the Pacific States, in order to prepare a minority report. The testimony taken by the Joint Committee covers over 1200 printed pages, and will be presented to Congress at its next session. The majority recommends measures to be taken by the President looking toward the modification of the existing treaty with China, confining it to strictly commercial purposes, and that Congress legislate to restrain the influx of Chinese to this country.

Stage Robbers in the Black Hills.

DEADWOOD, March 26.—A bold attempt to rob the Cheyenne and Black Hills stage, bound north, was made here this evening. As the coach was coming down Whitewood canyon, and about two and a half miles from Deadwood, five masked men, walking along the road before the stage, suddenly wheeled, ordered the driver to stop and instantly commenced firing on the coach. At the first fire Johnny Slaughter, the driver, was killed and Walter Lee of Deadwood, slightly wounded in the hand and arm. The horses started suddenly, throwing the driver, Lee and another passenger off the coach. The horses never stopped until they arrived in town, leaving the driver dead on the road. About twenty shots were fired at the coach, but none of the passengers except Lee was hurt. A party went out and found the body of the driver, with a charge of buckshot in his breast. The robbers got no booty. The Sheriff and party went at once in pursuit. The Sheriff offers a reward of \$500 for the robbers dead or alive.

How the Democrats Were Sold.

NEW YORK, March 26.—There seems now no doubt of the truth of the statement that Stanley Mathews and Charles Foster of Ohio, pending the counting of the electoral votes in Congress, entered into a contract with a lot of Southern Democrats by which it was agreed that if the latter would aid in completing the count and receiving the inauguration of Hayes as President, the Governments of Nichols and Hampton would be recognized by the new Administration. The present Senator Bayard succeeded his father, and both were elected to the Senate on the same day—the father to fill a vacancy and the son to succeed for the long term. Two brothers, Sandbury, have rotated in the Senate from Delaware—Willard having served twelve years, and Eli having succeeded him and now just entered his second term. Benton sat in the Senate with his son-in-law, Fremont, and Dodge, of Wisconsin, served in the same body with his son from Iowa. Butler served in the House with a son-in-law (Ames) in the Senate, and Chandler served in the Senate with a son-in-law (Hale) in the House. The strongest representation of any one family in Congress was the three Washburn brothers, who served together in Congress—Israel from Maine, Elizur from Illinois, and Cadwalader from Wisconsin.

The Chronicle says the prospect for the fruit crop in California is excellent, and unless any untoward events should occur within the next two weeks the yield will probably be abundant in quantity and excellent in quality. The extent to which our surplus can be disposed of in Eastern markets will chiefly depend upon the terms which shippers are able to make with the railroad companies.

SECRETARY SCHERZ has conceived the idea of saving a vast amount of money by establishing an advertising bureau, to be part of the Treasury or some other department, which shall have sole charge of all Government advertising, and save the expense of issuing proposals.

Mrs FANNY HAYES, the daughter of President Hayes, who will occupy such prominent place in Washington society for the next four years, is said to be a very pretty brunette, of medium height, and a very pretty figure, and about 19 years of age. She is very bright and intelligent, a good conversationalist, and will make a decided sensation in society.

THE "TUSCARORA TIMES."—The first number of this new candidate for public favors has been received, and is worthy of Littlefield, being exceedingly interesting in every department, and certain to prove a great auxiliary to the success of the camp. It should be supported liberally by the Tuscarorae.

The Virginia fire department is becoming organized slowly. The Fire Commissioners are doing their best to get the machine in running order, and Chief Brown is rendering very efficient assistance by his excellent plans and suggestions.

WARD DISTRICT.

From the Miner, of last week, we call the annexed information about the mines of that district:

PAYMASTER.

The rich body of ore in the Paymaster referred to in a late issue, continues to improve in richness as the tunnel is driven ahead. From sixteen to twenty tons per day of ore that gives an assay value of \$300 per ton is taken out, working only four men in the ore-body. As this ore-body forms itself exclusively in the granite, it is considered by mining men and experts the most important feature that has ever been developed in the mine, indicating that the whole granite belt, which is some one hundred feet in width on the surface, is but the "coping" of the immense ore body below. The stopes in the other portions of the mine are looking well and yielding good ore in fine quantities.

THE DEFIANCE.

Is not yielding as large quantities of ore as hitherto, but as soon as the south winze is down a few feet more and levels run from it, thus improving the facilities for working, the yield will be much greater than at present.

In the

MOUNTAIN PRIDE.

Some very rich ore is being found in the winze going down from the main tunnel.

READY CASH.

Drifting from main shaft to catch the large ore body found above. This drift will cut the chamber of ore 50 feet below the first or upper level, and will afford good facilities for working out the ore.

From the

EMILY.

Some good ore is being taken, and the evidences of the mine's permanency improves each day as the work progresses.

The prospecting done on the Consolidated has developed some very excellent ore, and the indications are strong that this will ultimately prove to be the most productive mine belonging to the company.

GOVERNOR CONSOLIDATED.

The mines of this new corporation are in splendid shape. The tunnel running into the Grampus is coming into the ledge, and is developing some very high grade ore. The Governor is looking well, and yielding very fine ore.

Work is progressing finely on the Prince mine. The incline is now in a very fine body of ore, and the value of each day's yield is about four times as much as the expense of extracting it.

FAMILY LUCK.—The American Congress has at various times contained Senators and Representatives chosen from the same Families, who were occupants of seats in the two Houses simultaneously. The succession of Don Cameron, of Pennsylvania, to his father, Simon, in the Senate, has led the Philadelphia Times to recount the annexed scrap of history on this head:

The present Senator Bayard succeeded his father, and both were elected to the Senate on the same day—the father to fill a vacancy and the son to succeed for the long term. Two brothers, Sandbury, have rotated in the Senate from Delaware—Willard having served twelve years, and Eli having succeeded him and now just entered his second term. Benton sat in the Senate with his son-in-law, Fremont, and Dodge, of Wisconsin, served in the same body with his son from Iowa. Butler served in the House with a son-in-law (Ames) in the Senate, and Chandler served in the Senate with a son-in-law (Hale) in the House. The strongest representation of any one family in Congress was the three Washburn brothers, who served together in Congress—Israel from Maine, Elizur from Illinois, and Cadwalader from Wisconsin.

REED & CO.

AGED BEAUTIES.

History is full of the accounts of the fascination of women who were no longer young. Thus Helen of Troy was over forty when she perpetrated the most famous elopement on record, and as the singer of Troy lasted a decade, she could not have been very juvenile when the ill-fortune of Paris restored her to her husband, who is reported to have received her with unquestioning love and gratitude. Pericles wedded the courtesan Aspasia when she was thirty-six, and yet she afterward, for thirty years more, wielded an undiminished reputation for beauty. Cleopatra was past thirty when Antony fell under her spell, which never lessened until her death, nearly ten years after; and Livia was thirty-three when she won the heart of Augustus, over whom she maintained her ascendancy to the last.

Turning to more modern history, where it is possible to verify dates more accurately, we have the extraordinary De Pociters, who was thirty-six when Henry II—then duke of Orleans, and just half her age—became attached to her; and she was held as the first lady and most beautiful woman at court up to the period of the monarch's death and accession to power of Catherine de Medicis. Anna of Austria was thirty-eight when she was described as the handsomest queen of Europe and when Buckingham and Richelieu were her admirers. Ninon de l'Enclos, the most celebrated wit and beauty of her day, was the idol of three generations of the golden youth of France, and she was seventy-two when the Abbe de Bernas fell in love with her. True it is that in the case of this lady a rare combination of culture, talents and personal attractions endowed their possessor seemingly with the gifts of eternal youth.

Bianca Capello was thirty-eight when the Grand Duke Francisco of Florence fell captive to her charms and made her his wife, though he was five years her junior. Louis XIV wedded Maline de Maintenon when she was forty-three years of age.
